

Pente HyperCore Cloud

The only plug and play, cloud-controlled, private 5G cellular network and orchestration platform

Pente makes it fast and easy to implement any private cellular network, integrate with any IT system, and manage it from anywhere.

The Pente HyperCore Cloud Platform simplifies deployment and orchestration, making it possible to operate and manage a private cellular network in a **matter of minutes**.

HyperCore consists of a cloud-controlled core, edge, and network orchestration software. From one single dashboard, you can remotely manage and scale your network with greater security and reliability.

Pente HyperCore Cloud Platform System Components

HyperCore Survivable Edge

- Smooth connection to RAN
- Out-of-the-box functional
- Auto detects new devices
- Service continuity even if disconnected from the cloud

HyperCore Control Center

- Cloud core & edge control
- Fast provisioning
- Over 600 APIs
- Monitor, report, analyze
- Customizable views and access
